I'm a developer, designer, and director from Madison, Alabama. I'm also a serious collector of video games, beer caps, trading cards, and table top board games. After finishing school, I took a position as a Web Developer for Intergraph. In October 2015, Intergraph SG&I rebranded as Hexagon Safety & Infrastructure, so I now serve as the technical lead for the development and maintenance of the company's public-facing website and other associated web projects. References available upon request.
